

~Your Research Project~

Step 1: The Question

- Brainstorm possible research questions. Possible sources include client questions, past research questions, your own assumptions.
- Remember that your research question must be clear, simple and relevant.
- Your Question:

Step 3: Creating Your Protocol

- What type of study are you creating? (interventional, observational, case study, etc...)

- Where will you get your subjects? (Clientele, family, hospital, etc...)

- What do your methods need to include? (Measurements, treatment protocol, etc..) Remember that detail is of the utmost importance!
 - Measurements
 - Detailed method

 - Treatments
 - Detailed method
